

# Public Lecture

Mathematics Awareness Month

Friday, April 10, 2015

David S. Ross, Rochester Institute of Technology

## *Careers in Math: What They Are, What They Should Be*

*Some academic mathematicians stay clear of practical applications of math, and some field practitioners are skeptical about the potential for math to advance their fields. We will discuss why those academics should reconsider their views, how math can make even greater contributions to science and technology, and why professionals of all types should be more optimistic about what math can do for them.*

**4:30 PM - 251 Malott Hall - Cornell University**

Join the speaker after the talk in Malott 532 for pizza and conversation, sponsored by the Math Club.
