Cluster Algebras, Poisson Structures, and Semiconductor Nets

I will discuss the definition of a cluster algebra, recently introduced by Fomin and Zelevinsky and a construction of a Poisson structure compatible with the cluster algebra structure. Examples include coordinate rings of double Bruhat cells, decorated Teichmüller spaces and homogeneous coordinate rings of Grassmannians. In the latter case, a connection with A. Postnikov’s map from semiconductor planar nets in a disk to a Grassmannian will be discussed, as well as its generalization to semiconductor nets in the annulus. (Based on joint work with M. Shapiro and A. Vainshtein)
